

Space Operations Contractor Enlists DataDrill Dashboards for Program and Contract Management

Fredericksburg, VA – November 11, 2008

Distributive Management announced today that a major player in the U.S. space industry is implementing Distributive's DataDrill metrics dashboard software to fulfill their contract management needs. The organization contracts with the federal government to provide safe, high-quality space program operations, services and technologies.

"The team is focused and committed to quality and performance at every level," says Don Baxter, Distributive Management Sales. The program management dashboard system provided by DataDrill will consistently deliver current information on all aspects of the contract, from cost to safety to schedule, supporting more than a dozen key management personnel as well as numerous program support staff and subcontractors. DataDrill's scorecard component will simultaneously monitor the program's progress against a standard set of strategic goals.

The group purchased a complete turnkey solution to allow for ample Distributive Management participation in their deployment success. "Using DataDrill, we are building an information repository and a set of core dashboards that meet their specific contract needs," says Duane Hillian, a member of the Distributive Management Technical Support team.

As a central, easily-accessible resource for all program management information relating to the organization's contract, DataDrill will replace many manual tasks and the effort-intensive production of report deliverables. "By more efficiently carrying out their contract functions," says Baxter, "they will continue to demonstrate the excellence and outstanding technical and managerial achievements in quality and performance for which they are known."
