

## DataDrill Delivers Solution to Project Management Dashboards in Classified and Unclassified Environments

Fredericksburg, VA – December 18, 2008

Distributive Management announced today that a global leader in the integration of mission-critical programs has purchased Distributive's DataDrill metrics dashboard software to support software project management that crosses between classified and unclassified areas of the business. The company develops a broad range of systems at the leading edge of space, defense, and electronics technology.

Having earned a reputation as an extraordinary performer, the company works in a process-oriented environment where sharing knowledge seamlessly across organizations is a critical success factor. Using Distributive's DataDrill software, the organization will establish a measurement process in the classified environment that can be easily mirrored in the unclassified environment.

"The unit's focus on systems engineering led them to the INCOSE Measurement Tool Survey," says Don Baxter, Distributive Sales Lead. "The full spectrum of DataDrill's functionality combined with its direct support for CMMI process improvement initiatives make DataDrill a superior fit for their needs."

DataDrill is uniquely designed to apply quantitative project management techniques to software, systems and IT projects and programs. By helping managers improve estimation, planning, measurement and risk management, DataDrill supports better decision-making.
